PS Connectors for Tabs

Features:

Secure Locking, Easy Insertion: The combination of terminal and housing provides easy mating onto the male tab. Unmating is also easy, by holding the housing while pulling, the contact lock spring is disengaged by the taper inside the housing. Should you accidentally pull the wire, the locking mechanism ensure that disengagement does not take place.

Stable Contact Performance: The contact is designed with a large contact area to give stable performance, even when high current is applied.

Mis-Insertion Prevention Mechanism and Housing Lance: Inside the housing is a stopper that prevents mis-insertion, which ensures that someone will not mistakenly insert a contact in the housing.

Specifications: Current Rating: 25A AC, DC (250 + AWG 10). **Voltage Rating:** 250V AC, DC. **Temp. Range:** -40°C to +105°C.

Applicable Tab: .187" Tab 0.5mm (.020")/0.8mm (.031") thick; .250" Tab 0.8mm (.031") thick.

Aluminum shell components. Standard olive drab, electrically conductive cadmium plated. Dependable 5 key/keyway polarization with bayonet lock coupling assures positive mating. Spring tension provided by a wave washer in the coupling nut ensures maintenance of interfacial seal between mating halves. Insert and main joint gasket molded from resilient neoprene. **Solder contacts** are installed. Pins and sockets are copper alloy/gold plated. **Strain relief** is included on plug.

PT solder series is UL recognized under file #E115497, Section 5

* Environmental resistant supplied with a multi-holed grommet and clamping nut for moisture-proofing individual open wires † Grommet seal with strain relief clamp

Aluminum shell components. Standard olive drab, electrically conductive cadmium plated. Dependable 5 key/keyway polarization with bayonet lock coupling assures positive mating. Spring tension provided by a wave washer in the coupling nut ensures maintenance of interfacial seal between mating halves. Insert and main joint gasket molded from resilient neoprene.

Crimp contacts are included, but not installed. (See contact hand crimping tools and contact installation/removal tools recommended below). Pins and sockets are copper alloy/gold plated.

Strain relief is included on plug.

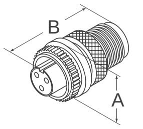
Circular 97 Series Threaded Connectors

with Solder Contacts (MIL-C-5015 Type)

Underwriters Laboratories approved recognition File E115497. Canadian Standard Association Certification File LR69183

Low cost, general duty, non-environmental MIL-C-5015 type connectors. Available in either A solid or B split shell styles. Used extensively in the machine tool industry, welding industry and numerous other commercial applications. • Single key/keyway polarization • Threaded coupling • Hard dielectric inserts made of diallyl-phthalate • Aluminum alloy components with a conductive cadmium plate finish and olive chromate after-treatment • Contacts are solder type, silver plated with pre-tinned solder cups • Cable clamps are zinc alloy with olive drab/green chromate finish

Fig. 1 — Straight Plug (97 Series)



Coupling ring machined from solid aluminum bar stock for high tensile strength. Mates with all types of 97 series receptacles. Front shell includes polarization keyway. Solid shell. Threaded backshell.

Fig. 2 — Straight Plug

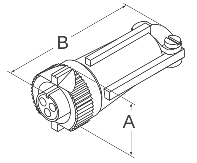


Fig. 3 — Angle Plug (97 Series)

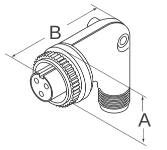

Shell is split longitudinally for convenient solder or inspection. Front shell is keyed to allow the 90 degree angle housing to be rotated and locked at any 45 degree increment.

Field Installable Connectors

A Switchcraft Company

Conxall was an innovator in the design of all plastic cylindrical connectors. The all plastic connector provides for substantial savings in cost without sacrificing performance and quality.

The all plastic connector is corrosion resistant, non-conductive and withstands substantial abuse, hostile environments, and heavy impacts that would otherwise cause metal connectors to corrode, deform or become electrically conductive and thus become unusable or unsafe.

MXR Series - Circular Connectors

Miniature Push-Pull Connectors with Ground Function

MXR type connectors are miniature, lightweight, push-pull lock connectors with a ground function which has been developed for use with VTR camera and system camera interfaces.

Features:

- The single action push-pull lock function allows quick connections and disconnections as well as high density mounting
- Verification of a secure engagement is afforded by a click sound which exemplifies the fine feel of this lock system
- Use of aluminum alloy for the shell has contributed to the lightweight design • One of the three conductors makes contact before the others in this sequenced design.

Specifications:

• **Withstand Voltage:** 300V AC for 1 minute • **Current Capacity:** 2A • **Insulation Resistance:** 1000 MΩ or greater at 100V DC • **Contact Resistance:** 20 mΩ or less at 1A AC • **Solder Pot Diameter:** 0.9 mm dia. **Applications:** VTR cameras, system cameras, audio equipment, etc. **Materials:** • **Shell:** Aluminum alloy, nickel plating • **Insulation:** PBT resin, black, UL94V-0 • **Male Pins:** Brass, gold plating • **Female Pins:** Phosphor bronze, partial gold plating

RP13A Series

Push-Pull Lock Connectors

Performance:

Withstanding Voltage: AC 300 minimum
Current Rating: 2A (AWG #24)
Insulation: 1000 MΩ max (DC250V)
Contact: 15 mΩ minimum (DC 1A)

Features: Single motion push-pull locking mechanism provides improved quick inserting/extracting capability. Multi-slot key mating guide prevents mis-insertion. Outer shell, made of strong glass fiber polycarbonate resin, is lightweight yet rigid. As the cable connection method, crimping is used for plug, and crimping and PCB dip for receptacle.

FL (Finger-Lock) Series Coaxial Connectors:

Low-profile microminiature high-frequency connectors. The FL Series connectors are low-profile micro-miniature coaxial connectors intended for high-density packaging of components on printed circuit boards. The FL Series is ideal for high-density circuit board wiring in signal transmission applications at high frequencies up to 1GHz.
Features: High-level matching: Maximum V.S.W.R is only 1.2 at frequencies up to 1GHz.
Applications: Typical applications include cellular telephones, radio communications equipment, electronic measuring instruments, CATV, control units, etc.
Material and Finish: • Shell: Brass or phosphor bronze, silver plating • Center contact (male): Brass, gold plating • Center contact (female): Phosphor bronze, gold plating • Insulation: Polybutylene terephthalate (PBT), black.
Performance Characteristics: • Characteristic impedance: 50Ω • Insulation resistance: 1000MΩ or more (at 250VDC) • Contact resistance: 10mΩ or less for both center and outer conductors (at 1 ADC) • Withstanding voltage: 250VAC (rms) for one minute • Coupling/removal force: 300 gf of more • Life of contacts: 50 times of use

S.FL2 Series Coaxial Connectors:

S.FL2 (Super FL Type 2 Coaxial Connector) Series is a surface mount, low profile, miniature coaxial connector intended for high density packaging. Compared to Hirose's FL Series connectors, the S.FL2 Series offers a 50% reduced profile when assembled, achieving increased density of internal wiring for high frequency transmission applications.
Features: Highly flexible, offers high frequency performance below V.S.W.R 1.2 over 0-2000MHz range.

H.FL Series Coaxial Connectors:

The H.FL connectors have a lower profile, with a mounted height of approximately 30% that of our S.FL2 connectors. They occupy 20% less board space, allowing higher density internal wiring.
Features: • High frequency response of V.S.W.R 1.3 or less from D.C. to 3000MHz.
Material and Treatment: • Shell: Phosphor bronze, silver plating • Insulator: PBT plastic (plug side), black; Liquid crystal polymer (receptacle side), black • Male center contact: Bronze, gold plating • Female center contact: Phosphor bronze, gold plating.
Performance Characteristics: • Characteristic impedance: 50Ω • Insulation resistance: 500MΩ or greater at DC 250V • Contact resistance: 20mΩ (center), 10mΩ (exterior) at DC 10mA • Dielectric strength: AC 300V (r.m.s), 1 minute • Contact service life: 50 times • Voltage standing wave ratio: 1.3 or less, DC to 3000MHz (target value)

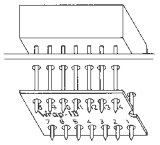
Socket Wrap I.D.

Now offering an exciting, low cost item used to identify pin numbers on wire-wrapping sockets. Consisting of a socket-sized plastic panel with numbered holes in the pin location, the Socket Wrap-ID is simply slipped onto the socket before wrapping.

You can also write on them for easy identification of location, IC part number, function, etc. These unique items greatly simplify both initial wire-wrapping and subsequent troubleshooting or repair.

A great help to hobbyists, technicians, and production facilities alike.



- Press fit to socket pins
- Improves wiring speed
- Instant pin numbering
- Reduces wiring errors
- Large space for user information
- Simplifies troubleshooting

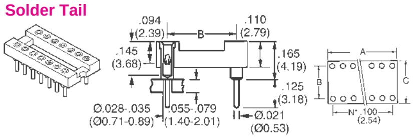
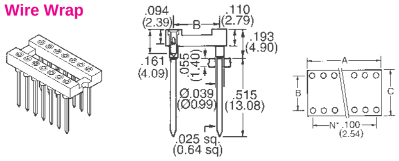
Dual-In-Line Sockets – Open Frame (Screw Machined)

Solder Tail



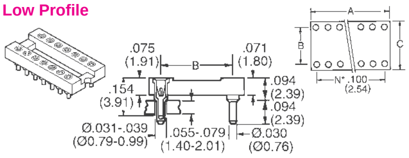
Most popular line of standard low profile IC-Sockets. Open frame design leaves space beneath IC for improved heat dissipation, easier PCB cleaning and inspection. **Insertion Characteristics:** 4-finger standard. **Plating: For ED3308-ED3964:** Sleeve (Pin) – 200µ" Sn. Contact (Clip) – 30µ" Au. **For ED3108-ED3764:** Sleeve (Pin) – 200µ" Sn. Contact (Clip) – 150µ" Sn. **For ED56083-ED56646:** Sleeve (Pin) – 10µ" Au. Contact (Clip) – 30µ" Au.

Wire Wrap



Solderless wire wrap terminals are firmly locked in the insulator body to withstand torque of wrapping tool. Length of terminal for three-level wrapping. **Insertion Characteristics:** 4-finger standard. **Plating: For ED4308-ED4964:** Sleeve (Pin) – 200µ" Sn. Contact (Clip) – 30µ" Au. **For ED57083-ED57406:** Sleeve (Pin) — 10µ" Au. Contact (Clip) — 30µ" Au

Low Profile



"Ultra low profile" Dual-in-line sockets are equipped with specially designed contacts allowing .095" (2.41mm) height above PCB. Special short contact requires .075" (1.91mm) insertion depth only. Solder tail diameter .030" (.76mm). **Insertion Characteristics:** 4-finger short contact. **Plating:** Sleeve (Pin) — 200µ" Sn. Contact (Clip) — 30µ" Au.

Single In-Line Strip Sockets — Solderless Press Fit, Compliant Tail

FEATURES:
Unique compliant tail pins conforms to .040" ±.003" (1.02mm ±08mm) finished hole diameter without stressing inner layers.

APPLICATION OF COMPLIANT TAIL PINS:
Mill-Max's patented (Patent No. 4,799,904) compliant tail features precision machined pins that are hollow and slotted to conform to a .040" ±.003" (1.02mm ±08mm) diameter PTH. As the pin is inserted, the slot compresses to fit the PTH, thus avoiding damage (see illustration). The pin's tail has fine serrations that form a perfect "gas tight" connection that doesn't require soldering. And since the pin doesn't damage the hole, compliant tail sockets and connectors can be easily replaced.

Anti-Static IC Pin Straightener:
Straightens IC legs with one squeeze. Put .300" (7.62mm) ICs in one side of tool, and .600" (15.24mm) in other side of tool. This brings leads into tolerance .320" (8.13mm) or .620" (15.75mm).

Note: This tool does not straighten IC legs that are bent to such an extent that the pin-to-pin spacing is not .100" (2.54mm).

A999-ND Dip Extractor:
An extremely handy, low cost tool for removing ICs from dip sockets.

Quad Flat Pack (QFP) to PGA Adapters

Fig. 1

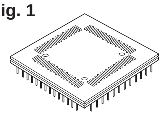

Fig. 2

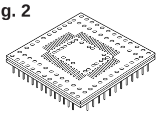

Adapters convert surface mount type Quad Flat Pack (QFP) packages to standard pin grid array through-hole packages on .100" (2.54mm) pin spacing. This allows the surface mount QFP package to be used in standard PGA and PGA ZIF sockets, which is extremely useful for testing. Typically, surface mount QFP packages are less expensive than their through-hole PGA counterparts. The surface mount packages are often more readily available. Also, the user does not have to redesign a through-hole board in order to utilize the advantages of the surface mount QFP packages.

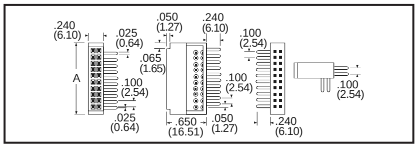
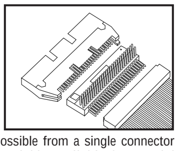
3M Intra-Connector™





When you wanted to test for a problem that might lie on the circuit board or in the cable, you had a problem. Inaccessible? Not with a 3M ESP Intra-Connector™ system. The Intra-Connector mates in-line with standard double row socket connectors. It has one set of female contacts, but two sets of male contacts at right angles. So, it provides instant line-by-line “probe-ability.” The pins can also be used to make daisy chaining possible from a single connector cable end. Modified configurations are quickly available for special connections. The Intra-Connector system provides both straight-in and right angle functions. It mates with a standard .10” x .10” (2.54mm x 2.54mm) dual row connector or PC board-mounted .025” (.64mm) square pins. Two Intra-Connector systems used with the Intra-Switch™ system form a complete test assembly for probing signals under no load and full-load conditions. Contacts are non-corrosive Alloy 770; body is glass-filled polyester thermo-plastic.

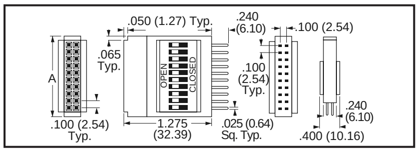
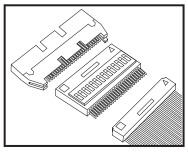
3M Intra-Switch™





There are a lot of complicated, time consuming ways to interrupt a signal line on an assembly — some may even be damaging to your PC board. But there’s one easy way; Intra-Switch™ from 3M ESP. Simply by inserting the Intra-Switch™ connector between mating system connectors you have instant line-by-line switching. The low profile design and recessed switch buttons give you room to work in confined areas. Using a pencil or probe tip, any or all switches may be actuated. Applications include switching command signals to or from test equipment and programming optional preset logic functions. Switch buttons are recessed to prevent accidental switching. “Open” and “closed” positions are clearly marked, molded-in the body. Contacts are non-corrosive Alloy 770; body is glass-filled polyester thermoplastic. Intra-Switch is compatible with most sockets and mating headers for flat cable, including 3M, T&B/Ansley, Berg, Amp, Symbex and many others.

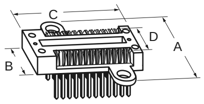
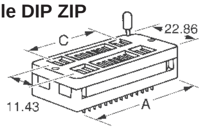
Receptacle for ZIP DIP Sockets



Double DIP ZIP



ZIP DIP II SOCKETS: For test and burn-in of all common dual-in-line packages on .100" lead spacing. The zero insertion pressure feature allows easy insertion and removal without lead distortion. Receptacles are ideal for high use situations such as PROM programming.

ECONO ZIF SOCKETS: Designed for OEM/end use applications where field replacement or programming of DIPs is required. The patented ZIF feature uses screwdriver rotation of a cam (instead of a lever) for security against vibration or accidental unloading. Leads are on .100" centers.

RECEPTACLES FOR ZIP DIP: Features: • Matching receptacle for every ZIP DIP Socket • Mounting flange standard option to hold receptacle to board • Pre-tapped holes in receptacle body mate with screw-hole in socket to hold socket firmly to receptacle (2 screws provided with each receptacle) • Available in solder-tail options. **Physical Specifications:** • Insulation Material: Glass Reinforced Polysulfone, Flammability Rating: UL 94V-0 • Color: Green • Marking: Part Number Identification • Contact Material: Beryllium Copper • Plating: 30µ" (.076µm) Gold — MIL-G-45204, Type II, Grade C over 50µ" (1.3µm) Sulfamate Nickel per QQ-N-290A, Class 2 or 75µ" (1.9µm) Nickel Boron. **Electrical Specifications:** • Current Rating: 1Amp • Insulation Resistance: >1x10^{12}Ω at 500 Vdc Withstanding Voltage: 1000Vrms at Sea Level. **Environmental Specifications:** • Temperature Rating Operating: -67°F (-55°C) to +302°F (+150°C)

ZIP DIP SOCKETS .100 CENTERS - DOUBLE DIP: Features: • For DIPs with .100" lead spacing • Extra wide contact zone allows insertion of DIPs with distance between rows from .300" through .600" • Lever actuated zero insertion force mechanism • Socket easily disassembles for repairability

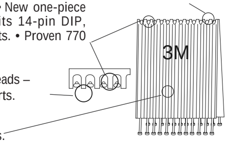
3M IC Test Clips

New “open-nose” design now permits probe tip access at DIP leads.

• Simplifies prototype and production testing, field service work, and Quality Control. • New one-piece body for each DIP size. TC-14 fits 14-pin DIP, etc. • High reliability Gold contacts. • Proven 770 Alloy contacts.



“Contact comb” fits between DIP leads – eliminating any possibilities of shorts.

New “duck-bill” contacts are flat-won't roll off new narrow DIP leads.

Rugged, engineering-grade thermoplastic body molded around contact pins

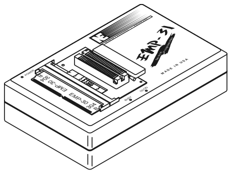
EMP-31 Programmer

Programs: EPROMS, Gals, Microcontrollers, PLD, Flash, EEPROMS, Serial EEPROMS.



The EMP-31 is an advanced universal programmer that supports digital voltages from 1.8 Volts to 7 Volts and analog voltages (such as VCC) from 0 to 25 volts. The EMP-31 provides near-theoretical programming times for most devices currently available. The EMP-31 is the fastest, most reliable and most versatile programmer in the EMP line. It supports more device types with larger pin counts than the smaller units in the EMP line, and changing Family Modules is not required as often. The socket module on top of the EMP-31 is removable, allowing different modules to be plugged in to accommodate different device packages. This helps eliminate the confusion often caused by third party adapters. The EMP-31 comes standard with a 48-pin DIP Socket Module and thirteen Family Modules. The unit contains three microprocessors, and automatically performs self-test and calibration verification upon power-up.

EMP-31USB: Incorporates a USB interface to the PC in addition to the standard interface. Increases portability as well as simplicity.

Virtex and Spartan Field Programmable Gate Arrays

The **Virtex FPGA** family delivers high performance, high capacity programmable logic solutions. Dramatic increases in silicon efficiency results from optimizing new architecture for place and route efficiency and exploiting an aggressive 5 layer metal 0.22 mm CMOS process. These advances make Virtex FPGAs powerful and flexible alternatives to mask programmed gate arrays. System performance up to 200 MHz - 66 MHz PCI Compliant-Hot swappable for Compact PCI. The **Virtex-E family** is up to 30% faster than the Virtex family. System performance up to 240 MHz using singled ended selectI/O technology. Virtex-E devices have up to 640 Kb of faster (250 MHz) block SelectRAM, but the individual RAMs are the same size and structure as in the Virtex family. Both Virtex Families are supported by FPGA Foundation™ and Alliance Development Systems.
The **Spartan™-II 2.5V** Field -Programmable Gate Array family gives users high performance, abundant logic resources, and a rich feature set, all at an exceptionally low price. System performance is supported up to 200 MHz. The **Spartan™-II 1.8V** Field Programmable Gate Array is similar to the Spartan-II family but operates at a lower voltage.

XILINX Programmable Gate Arrays

FPGA (Field Programmable Gate Arrays)

A Technical Overview:

Every Xilinx FPGA performs the function of a custom LSI circuit, like a gate array, but the Xilinx device is user-programmable and even reprogrammable in the system.

Xilinx sells standard off-the-shelf devices in many different sizes, speeds, operating temperature ranges, and packages.

The user selects the appropriate Xilinx device, and then converts the design idea or schematic into a configuration data file, using the Xilinx development system software and loads this file into the Xilinx FPGA.

XC3000/XC3100

• Replaces TTI, MSI, and other PLD logic • Toggle rates of 70 to 125 MHz, delays from 9 to 5.5 ns • Unlimited reprogrammability

CPLDs (Complex Programmable Logic Devices)

Atmel offers a broad range of high-density, low-power, and cost-effective solutions enabling designers to create products that are "just what the market ordered." Based on a standard architecture, which uses industry standard development tools, Atmel's CPLDs offer the unique low-power or "L" feature while providing 100% connectivity. These devices are processed with Atmel's proprietary 0.65-micron processes and have a EEPROM memory.

The ATF750/C CPLDs are based on a 22V10-type architecture and provide market-leading capacity and flexibility in a 22V10 footprint with twice the registers and additional features for better logic utilization.

The ATF1500 Series is targeted at wider logic density, with higher number of I/O's. This family has devices from 44 to 160 pins, and 32 to 96 I/O's. High connectivity, and flexible architecture make these parts highly suitable for system design. In system programmability in the larger devices allow for reconfiguration even after the device is in the system.

Standard Development Tools

Atmel's philosophy is that designers should be able to use known development tools. Third-party design tools such as Synario™, ABEL™, CUPL™, PPLDesigner-XL™, LOG/iC™, and PLDSyn™ support Atmel's EPLDs. Also Atmel-specific versions of the popular Synario, ABEL, and CUPL design tools are offered. In addition, workstation support is available on popular platforms with Viewlogic, MINC, Cadence, Mentor, and Synopsys.

ATF15xx-DK2 CPLD Development Kit

The ATF15xx-DK2 is a second generation low-cost development programmer kit for the designer who wishes to begin working with Atmel's ATF15xx family of industry standard pin-compatible Complex Programmable Logic Devices (CPLD) with Logic Doubling™. Like the original ATF15xx-DK, the "DK2" allows designers to design, synthesize, simulate, program and evaluate their designs using their choice of either free Atmel-WinCUPL™ design software or a 30-day free trial version of Atmel-ProChip Designer™ using any 84-pin ATF15xx device, such as those provided with the kit. In addition, the kit can be extended to be used to program all of the Atmel ATF15xx Family with different packages by simply adding the package adapters (only PLCC84 is included in the kit). Once the design is completed, the designer can install a sample ATF15xx Family device in the provided PCB and program it using the built-in In-System-Programmable (ISP) industry-standard 4-pin JTAG interface, ATMISP software, and PC parallel port cable provided. The tutorial included takes the designer through the complete CPLD development process. All software runs on PC Windows™ platforms. In addition, mounting holes are provided to add wire-wrap terminals for all pins to allow comprehensive proto-typing and evaluation. The ATF15xx-DK2 includes everything a designer needs to get started with Atmel-Logic Doubling CPLDs including:

CPLD Demo Board/Programmer Board: • 84-lead PLCC Adapter • ISP (JAT) Port • Wire-wrap Terminal Holes-all Pins • 2 MHz Crystal Oscillator • Eight 8-segment LED Displays • 5V and 3.3V Vcc operation • Easy access to CPLD I/O pins • Global Clear, Output Enable and Power Switches

ATMEL FPGA's (Field Programmable Gate Arrays)

AT40K Series FPGAs

Atmel's AT40K Series coprocessor FPGAs range from 5K to 50K usable gates, and are designed for high density, compute-intensive DSP and other fast logic designs. The AT40K family solves the Logic vs. SRAM trade-off problem by providing fast, flexible, distributed 10ns FreeRAM™ without using valuable logic resources. Structured logic functions, including variable array multipliers can be implemented directly in core cells without using any bussing resources - providing dramatic improvements in speed, utilization, power and system cost.

The AT40K family has the ability to implement Cache Logic design, where part of the FPGA can be reprogrammed without loss of register data, while the remainder of the FPGA continues to operate without disruption. This is ideal for building adaptive filters, variable coefficient multipliers and other designs where the datapath can change to increase system performance.

All Atmel FPGAs can be designed using industry standard CAE tools for schematics, VHDL and Verilog on a PC, Sun, or HP workstation. Software tools are available on Atmel's website at: http://www.atmel.com/fpga_software.html

Features:

• Distributed, single/dual port 10ns SRAM, independent of logic cells • Up to 384 PCI compliant I/Os • Mixed 3V/5V capability • Architecture optimized for efficient, ultrafast array multipliers • Cache Logic® dynamic full/partial reconfigurability in-system • Eight global clocks • Efficient, industry-standard design tools, optimized for synthesis • QuickChange™ tools for adaptive hardware designs • Variety of surface mount packages • All devices in family are pin-compatible

ATMEL AVR 8-Bit RISC Microcontrollers

Atmel's new AVR microcontrollers have a RISC core running single cycle instructions and a well-defined I/O structure that limits the need for external components. Internal oscillators, timers, UART, SPI, pull-up resistors, pulse width modulation, ADC, analog comparator and watch dog timers are some of the features you will find in AVR devices. AVR instructions are tuned to decrease the size of the program whether the code is written in C or Assembly. With on-chip in-system programmable Flash and EEPROM, the AVR is a perfect choice in order to optimize cost and get product to the market quickly.

The AVR is a low-power CMOS 8-bit series of microcontrollers based on the AVR RISC architecture. By executing powerful instructions in a single clock cycle, they achieve throughputs approaching 1 MIPS per MHz allowing the system designer to optimize power consumption versus processing speed. The AVR core combines a rich instruction set with the 32 general purpose working registers. All 32 registers are directly connected to the Arithmetic Logic Unit (ALU), allowing two independent registers to be accessed in one single instruction executed in one clock cycle. The resulting architecture is more code efficient while achieving throughputs up to ten times faster than conventional CISC microcontrollers.

General Features:

- Utilizes the AVR high-performance and low-power RISC architecture
- 32 x 8 general purpose working registers
- Programming Lock for Flash program and EEPROM data security
- Low-power idle and power down modes
- External and internal interrupt sources
- Low-power, high speed CMOS process technology
- Fully static operation

CAN-DEMOBOARD1 and CANADAPT28

The T89C51CC01 demo-kit is a standalone application board to easily evaluate the T89C51CC01 device. Designers can use the T89C51CC01 UART connected to a PC serial port, or the CAN bus interface connected either to a CAN board plugged into a PC or a parallel port dongle able to recreate a CAN line. It is also possible to link this kit to an existing CAN High Speed network to initiate or receive CAN messages.

Kit Includes: • User's manual • CANary™ CDROM, containing a full set of documentation and associated software

C51 Generic Demoboard features: • LCD display (2 lines of 16 characters) • Eight LED bargraph • Socket for 128kB Flash memory (2 x 64kB memory page) • Three different sockets: PLCC44, PLCC68 and DIL24 (for standard C51) • In-system Programming (ISP) capability to download HEX files into the 128kB flash • Hardware switch to activate the C51 Flash boot loader after reset • RS-232 connector • Extension connectors • On-board regulator (9V external supply)

CAN Extension Board features:
• On-board CAN transceiver in SO8 package. DIP8 socket also available for other types of CAN drivers • D-sub connectors conforms to CIA ("CAN In Automation") recommendation for CAN High Speed Bus • ADC reference voltage inputs: VAGND and VAREF • Capability to activate T89C51CC01 boot loader to perform ISP of Flash and/or EEPROM using either UART or CAN connectors

At only 1.6" x 2.3" x 0.86", this compact microprocessor core module with integrated Ethernet facilitates rapid development of embedded systems, giving designers a complete package for control and communication with instant local or worldwide connectivity.

Included are general-purpose I/O, memory I/O interface, battery-backable clock, cold boot capability, and a slave mode operation. The integrated Ethernet port frees designers from the limitations of serial port communications. Embedded systems using the RCM2200 can be controlled and monitored (as well as programmed and debugged when using appropriate accessory hardware) across any network or the Internet. Two 26-pin male connectors on the RCM2200 mate with common dual-row 2mm sockets on your board. Flash and SRAM are onboard, providing a development-ready memory interface. 26 parallel I/O lines may be used to interface to almost any digital device. 8-bit bi-directional data bus lines, 4 address lines, and the necessary strobes are provided to easily interface communications peripherals, input or output registers, or small memories as I/O devices.

Programs are created using Z-World's Dynamic C®, a user-friendly C-language environment that includes an editor, compiler, and debugger with royalty-free TCP/IP stack in source form. To permit parallel development, the RCM2200 is pin-compatible with the non-Ethernet RCM2300.

SENSORY

Interactive Speech™
Voice Extreme™ Toolkit

Voice Extreme is a programmable module and suite of development tools for building interactive speech applications quickly and easily. Using a highly integrated, low cost chip, developers can write programs in VE-C, a high-level language very similar to ANSI-C. VE-C provides access to numerous voice and audio technologies, in addition to hardware features such as I/O ports, timers and an RS-232 interface.

A Voice Extreme application consists of a program file plus any data files it needs, linked together into a binary image file that can be downloaded to a 2Mbit flash memory. This program is then executed by the Voice Extreme interpreter, which runs in ROM on the VE IC. Because the VE IC has speech processing technology code already in firmware, application code is compact and executes quickly.

NEW! Voice Direct™ II Speech Recognition Kit

Voice Direct II preforms speaker-dependent discrete word recognition by comparing a pattern generated in real time with previously trained word templates. The pattern generated by Voice Direct II is based on a digital reconstruction of the voice command. Each word to be recognized must first be trained. During training, Voice Direct II constructs a template representing the individual speaker's unique sound pattern for each specific word or phase to be recognized. Templates are stored in non-volatile flash memory. During recognition a new template is produced and compared to the stored templates to determine which word was spoken. Voice Direct II features integrated speech prompting for both training and recognition operations, allowing the development of sophisticated interactive products with minimal programming.

Features:

- Edge-Triggered, Continuous Listening and Word-Spotting speech recognition technologies
- Minimal external components
- Recognizes up to 15 words or phases (broken in to 1, 2 or 3 sets)
- Over 99% recognition accuracy with proper design
- Phrase recognition up to 2.5 seconds
- User-friendly speech prompting
- Quick setup time

QV400D: Prototype Programming Kit for Winbond ChipCorder Devices

System Overview:

QV400D™ provides all the software and hardware functions needed to develop complex messaging systems using Winbond's ChipCorder family of analog recording devices.

- Supports all current Winbond ChipCorders in 28-Pin DIP packages except the ISD5008 and 5116 devices which require socket adapters.
- Utilizes standard Windows® .wav format as input (11.025KHz, 16-Bit mono format only).
- Project management software includes message concatenation creation and auditing for building complex, compact, message systems.
- Data are written to precise, pre-computed locations; each programmed device is identical.
- Word and concatenation look-up tables are automatically created. The tables can also be used by the customer to create microprocessor look-up tables.
- Simple hookup; a single stereo audio cable carries both signal and control commands.

Project Software:

QV400S™ is a software package designed to unify the interface between users and various speech development systems produced by Quadravox. It consists of one executable file, QV400S1.exe (for Windows 95 or later), several DLLs (one at least for each development system), several help files, and an initialization file, QV400S1.ini (Win95 or later).

- Data acquisition using a standard 16-Bit sound card. Existing .wav files (11.025KHz, mono, 16-Bit) work fine, too.
- Organization of .wav files into projects and concatenation lists.
- Auditing of recorded segments, and of concatenations to verify proper prosody.
- Computation of exact address based on chip type and sample rate.

Programmer Hardware:

The speech data created by the project software may be programmed into any Winbond ChipCorder device using the QV400D Programmer Board. Separate easy-to-use ZIF sockets are provided for the ISD1000-2500 and ISD33000-4000 devices. In most PC systems, amplified speakers are connected to the sound card line output. The programmer is interposed between the PC line out and amplified speakers. No other connections to the PC are required. QV400D is designed to pass both channels through when it is not in use, but this feature will function only if the QV400D power supply remains connected.

Power Supply:

Output voltage: 9V DC; Current: 200mA minimum, 110V AC, 60Hz input

Minimum System Requirements:

QV400D will run on any PC operating under Windows '95 or '98

- CPU Pentium 66Mhz
- 8MB Ram (16MB and up preferred)
- 1.5MB hard disk space
- A 16-Bit sound card capable of 11.025KHz record and 16-Bit, 44.1KHz stereo playback is also needed for data acquisition.

Prototype Programming Kit for Winbond ChipCorder Devices

Kit Contents:

- 2 Floppy Disks containing all QV400D software and documentation (Help file).
- 1 Programmer Board with two empty ZIF sockets.
- 1 Audio Cable (6 ft. shielded, 1/8" stereo miniplug at both ends).

Winbond
Electronics Corporation America

Single-Chip Voice Record/Playback Devices

General Description: Winbond's patented ChipCorder® technology is a revolutionary multilevel technique to record and play back sound on a single chip. The advanced technology provides natural sound reproduction, in a cost-effective device that retains stored messages in the event of power loss or battery replacement.

The technology, based on a unique multilevel storage approach, stores multiple voltage levels into previously binary, two level EEPROM memory cells. Unlike traditional voice solutions whereby voice is digitized, the Winbond approach stores analog signals directly into single cells as one of over 250 levels.

All ChipCorder products integrate the oscillator, microphone pre-amplifier, automatic gain control, anti-aliasing filter, smoothing filter, and speaker amplifier on-chip to achieve a complete "system on a chip." Only a microphone, speaker, power source, and a few passive components are needed to implement a complete record/playback function.

ISD1100 Series

Description: The ISD1100 has been designed for low-cost consumer applications where a bare die is mounted directly to the PC board. The inclusion of pull-up or pull-down resistors on the input pins minimizes the number of signals used and the number of external components or bonding wires required.

Features: • Pushbutton interface • 5 volt operating range • Automatic power-down

ISD1200 Series

Description: The ISD1200 offers a simple push-button interface coupled with the automatic power-down feature. It offers full addressability to handle multiple messages on a single chip. It is ideal for toy applications.

Features: • 5 volt operating range • Automatic power-down • Fully addressable to handle multiple messages

ISD1400 Series

Description: The ISD1400 expands on the simple push-button interface of the ISD1200, with longer storage durations of 16 and 20 seconds. It offers full addressability to handle multiple messages on a single chip and is widely used in communication and consumer applications.

Features: • 5 volt operating range • Automatic power-down • Fully addressable to handle multiple messages

ISD2500 Series

Description: The ISD2500 family offers improvement in speech length up to a maximum of 90 seconds. This extends the single-chip voice solution to industrial and high-end consumer applications. This family offers sound capability for new applications such as cellular phones, answering machines, voice-response faxes, copy machines and industrial applications where voice prompting provides product differentiation for equipment and manufacturers.

Features: • 5 volt operating range • Fully addressable to handle multiple messages • Directly cascadable for longer durations • Automatic power-down (push-button mode)

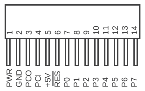
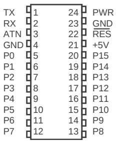
PARALLAX INC BASIC Stamp Modules

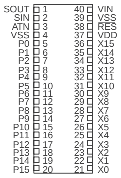
BS1-IC



BS2-IC, BS2E-IC, BS2SX-IC, and BS2P24



BS2P40



Stamp-Sized Modules Run BASIC

These modules are general-purpose I/O computers which are programmed in BASIC. The language set has instructions for interfacing with electronic circuitry including shift registers, integrated circuits that use SPI, solid state relays, or devices that use asynchronous serial protocols.

BS1: Runs at 4MHz, has 8 I/O lines, and program storage for 80 lines of BASIC code.

BS2: Steps up to 16 I/O lines and program storage for 600 instructions. It's speed also increases to 20MHz.

BS2SX: Increases the speed to 50MHz and program storage to 4000 lines of BASIC code. It also adds 64 Bytes of scratch pad RAM.

BS2E: Has the RAM and program storage of the BS2SX, but runs at the BS2 speed to save power.

BS2P24 and BS2P40: Have several advantages over other Stamps. They run at 20MHz but actually executes instructions faster than the BS2SX. They have all of the features of the BS2SX plus they have commands for interfacing with parallel LCD's, I2C devices, and Dallas Semiconductor "One Wire" parts along with a polled interrupt capability.

rfPIC12C509 8-Bit CMOS Microcontroller with UHF ASK/FSK Transmitter

The rfPIC12C509AG/509AF from Microchip Technology is a low-cost, high performance, 8-bit, fully static, EPROM-based CMOS microcontroller combined with a UHF ASK/FSK transmitter. It employs an RISC architecture with only 33 single word/single cycle instructions. All instructions are single cycle (1µs) except for program branches which take two cycles. The Transmitter is a fully integrated UHF ASK/FSK transmitter consisting of crystal oscillator, phase-locked loop (PLL), open-collector differential-output Power Amplifier (PA), and mode control logic. External components consist of bypass capacitors, crystal, and PLL loop filter. There are no internal electrical connections between the PICmicro MCU and the transmitter. The PICmicro MCU oscillator is independent from the transmitter crystal oscillator. The rfPIC12C509AG is capable of Amplitude Shift Keying (ASK) modulation by turning the PA on and off. The rfPIC12C509AF is capable of ASK or Frequency Shift Keying (FSK) modulation by employing an internal FSK switch to pull the transmitter crystal via a second load capacitor.

Features:
- Conforms to US FCC Part 15.231 regulations and European ERC 70-03E and EN 300 220-1 requirements
- Frequency range set by crystal: 310-480MHz
- ASK Data rate: 0-40Kbps
- FSK through crystal pulling allows modulation at 0-20Kbps
- Adjustable output power: +2dBm to -12dBm in six discrete steps
- Wide temperature range: Industrial: -40°C to +85°C

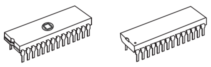
8-Bit RISC Microcontrollers

PIC16C5X and PIC16HV540 Series



General Description: Microchip's long history of innovation has proven its commitment to develop and market leading edge products. With its PIC, Microchip has engineered *the most advanced low-to mid range 8-Bit Microcontroller family on the market today*. The flexibility of CMOS OTP EPROM Technology, the superior performance of RISC Architecture and the smallest packaging combined with affordable pricing are the prime reasons systems designers select PIC as their Microcontroller of Choice. With PIC, the 8-12 week lead time typical of ROM MCUs is reduced to just days. In addition, PIC's code compaction factor takes weeks off system design time. PIC's small die size combined with Microchip's advanced CMOS technology, support a *wide performance range* and low operating and standby currents. Low currents are ideal for long-life battery dependent applications. One of PIC's strongest suits is its I/O capability.

PIC16C5X (Use Programmer PICSTART Plus)

Features: Only 33 single word instructions to learn • All single cycle instructions (200 ns) except for program branches which are two-cycle • 12-bit wide instructions • 8-bit wide data path • 512 - 2K x 12 on-chip EPROM program memory • 25 to 73 x 8 general purpose registers (SRAM) • 7 special function hardware registers • 2 level deep hardware stack • Direct, indirect and relative addressing modes for data and instructions • 8 bit real time clock/counter (RTCC) with 8-bit programmable prescaler • Oscillator start-up timer • Watchdog timer (WDT) with its own on-chip RC oscillator.

PIC16C54C (Use Programmer PICSTART Plus)

Features: The PIC16C54C expands the baseline family with a low end device that offers lower power consumption and enhanced electrical characteristics. The PIC16C54C provides a cost reduction path for PIC16C57 and PIC16C58B users that require less program memory or data memory for a new application. Also some current PIC16C54, 54A, and 54B users may migrate to the PIC16C54C to enjoy the advantages of lower power consumption and enhanced electrical characteristics all at a lower cost. Software is supported from the PIC16C54 directly to the PIC16C54C with no software code changes. The PIC16C54C is equipped with special microcontroller-like features that reduce system cost and power requirements. There are four oscillator configurations to choose from, including power saving LP (Low Power) oscillator and cost saving RC oscillator.

PIC16HV540 (Enhanced PIC16C54 EPROM-Based 8-Bit CMOS Microcontroller with On-Chip Voltage Regulator)

General Description: The PIC16HV540 is a low-cost, high-performance, 8-bit, fully-static, EPROM-based CMOS microcontroller. It is pin and software compatible with the PIC16C5X family of devices. It employs an RISC architecture with only 33 single word/single cycle instructions. The PIC16HV540 is the first One-Time-Programmable (OTP) microcontroller with an on-chip 3 Volt and 5 Volt regulator. This eliminates the need for an external regulator in many applications powered from 9 Volt or 12 Volt batteries or unregulated 6 Volt, 9 Volt or 12 Volt mains adapters. The PIC16HV540 is ideally suited for applications that require very low standby current at high voltages. These typically require expensive low current regulators.

The PIC16HV540 is equipped with special features that reduce system cost and power requirements. The Power-On Reset (POR) and Device Reset Timer (DRT) eliminate the need for external reset circuitry. There are four oscillator configurations to choose from, including the power-saving LP (Low Power) oscillator, cost-saving RC oscillator, and XT and HS for crystal oscillators. Power saving SLEEP mode, Watchdog Timer and code protection features improve system cost, power and reliability.

Applications: The PIC16HV540 is very versatile even in areas where no microcontroller use has been considered before (e.g., timer functions, replacement of "glue" logic in larger systems, coprocessor applications). The PIC16HV540 fits perfectly in low-power battery applications such as CO and smoke detection, toys, games, security systems and automobile modules.

Features: • High-Performance RISC CPU • 18-pins • 12 I/O • 512 EPROM • 25 RAM • Only 33 single word instructions to learn • All instructions are single cycle (200 ns) except for program branches which are two-cycle • Operating Speed: DC - 20 MHz clock input; 200 - ns instruction cycle • 12-bit wide instructions • 8-bit wide data path • Seven special function hardware registers • ***Four-level deep hardware stack*** • Direct, indirect and relative addressing modes for data and instructions. **Peripheral Features:** • 8-bit real time clock/counter (TMR0) with 8-bit programmable prescaler • Power-On Reset (POR) • Brown-Out Protection • Device Reset Timer (DRT) with short RC-oscillator start up time • Programmable Watchdog Timer (WDT) with its own on-chip RC oscillator for reliable operation • Sleep Timer • ***8 High Voltage I/O*** • ***4 Regulated I/O*** • Wake up from SLEEP on pin change • Programmable code-protection • Power saving SLEEP mode • Selectable oscillator options: RC – Low-cost RC oscillator; XT – Standard crystal/resonator; HS – High speed crystal/resonator; LP – Power saving, low frequency crystal • Glitch filtering on master clear and pin change inputs. **CMOS Technology:** • ***Selectable on-chip 3V/5V Regulator*** • Low-power, high-speed CMOS EPROM technology • Fully static design • ***Wide-operating voltage range: 3.5V to 15V*** • Temperature range: Commercial: 0°C to 70°C; Industrial: -40°C to 85°C • Low-power consumption: <2mA typical @ 5V, 4 MHz; 15µA typical @ 3A, 32kHz; <4.5µA typical standby current @ 15V (with WDT disabled), 0°C t0 70°C.

PIC16C58B (Use Programmer PICSTART Plus)

Features: The PIC16C58B expands the baseline family support with a larger memory, small pin count device. The PIC16C58B provides upward migration path to PIC16C54 and PIC16C56 customers that require more program or data memory. In addition, PIC16C57 customers that do not require as much I/O capability can migrate down to 18 pins to save cost and board space. The PIC16C58B positions in the high-end of the baseline family between the PIC16C56 and the PIC16C57 providing the same memory capability of the PIC16C57 in the smaller 18 pin package. Only small code changes are necessary to interface to the I/O pins will be required The PIC16C58B is equipped with special microcontroller-like features that reduce system cost and power requirements. There are four user selectable oscillator configurations to choose from, including power saving LP (Low Power) oscillator and cost saving RC oscillator.

Maximum output current sinked by any I/O pin = 25mA; sourced by any I/O pin = 20mA. Do not exceed more than 800 mw of total power dissipation. EPROM = Erasable PROM; OTP= One Time Programmable Only

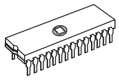
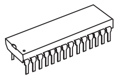
8-Bit RISC Microcontrollers

PIC16C6X Series





General Description:

The PIC16C6X is a family of low-cost, high-performance, CMOS, full-static 8-bit microcontrollers.

"A" Version parts have an additional brown-out detect circuit.

(Use Programmer PICSTART Plus)

All PIC16/17 microcontrollers employ an advanced RISC-like architecture. The PIC16CXX has enhanced core features, eight-level deep stack, and multiple internal and external interrupt sources. The separate instruction and data buses of the Harvard architecture allow a 14-bit wide instruction word with the separate 8-bit wide data. The two stage instruction pipeline allows all instructions to execute in a single cycle, except for program branches (which require two cycles). A total of 35 instructions (reduced instruction set) are available. Additionally, a large register set gives some of the architectural innovations used to achieve a very high performance.

PIC16C6X Microcontroller Core Features:

- High-Performance RISC CPU
- Only 35 single word instructions to learn
- All single cycle instructions except for program branches which are two-cycle
- Operating speed: DC - 20MHz clock input, DC - 200ns instruction cycle
- Interrupt capability
- Eight level deep hardware stack
- Direct, indirect and relative addressing modes
- Power-on Reset (POR)
- Power-up Timer (PWRT) and Oscillator Start-up Timer (OST)
- Watchdog Timer (WDT) with its own on-chip RC oscillator for reliable operation
- Programmable code-protection
- Power saving SLEEP mode
- Selectable oscillator options
- Low-power, high-speed CMOS EPROM/ROM technology
- Fully static design
- Wide operating voltage range: 2.5V to 6.0V
- Commercial, Industrial and Extended temperature ranges

High-Performance 8-Bit CMOS EPROM Microcontrollers
PIC17C4X, PIC17C75X, and PIC17C76X Series

PIC17C4X

(Use Programmer PICSTART Plus)

Overview:
All PIC16/17 microcontrollers employ an advanced RISC architecture. The PIC17CXX has enhanced core features, 16-level deep stack, and multiple internal and external interrupt sources. The separate instruction and data buses of the Harvard architecture allow a 16-bit wide instruction word with a separate 8-bit wide data. The two stage instruction pipeline allows all instructions to execute in a single cycle, except for program branches (which require two cycles). A total of 55 instructions (reduced instruction set) are available in the PIC17C42 and 58 instructions in all the other devices. Additionally, a large register set gives some of the architectural innovations used to achieve a very high performance. For mathematical intensive applications all devices have a single cycle 8 x 8 Hardware Multiplier.

Microcontroller Core Features:
• Only 58 single word instructions to learn • All single cycle instructions (121ns) except for program branches and table reads/writes which are two-cycle • Operating Speed: DC - 33MHz clock input, DC - 121ns instruction cycle • Hardware Multiplier • Interrupt capability • 16 levels deep hardware stack • Direct, indirect and relative addressing modes • Internal/External program memory execution • 64K x 16 addressable program memory space

Peripheral Features:
• 33 I/O pins with individual direction control • High current sink/source for direct LED drive: RA2 and RA3 are open drain, high voltage (12V), high current (60mA), I/O • Two capture inputs and two PWM outputs: Captures are 16-bit, max resolution 160ns, PWM resolution is 1- to 10-bit • TMR0: 16-bit timer/counter with 8-bit programmable prescaler • TMR1: 8-bit timer/counter • TMR2: 8-bit timer/counter • TMR3: 16-bit timer/counter • Universal Synchronous Asynchronous Receiver Transmitter (USART/SCI)

Special Microcontroller Features:
• Power-on Reset (POR), Power-up Timer (PWRT) and Oscillator Start-up Timer (OST) • Watchdog Timer (WDT) with its own on-chip RC oscillator for reliable operation • Code-protection • Power Saving SLEEP mode • Selectable oscillator options

MCP2510 CAN Developer's Kit

Features:

For an introduction to CAN, this tool can be used to demonstrate basic communication on a CAN bus via message transmission and reception. Messages are created on a host PC for transmission to the target board. As messages are sent or received, LEDs connected to the MCP2510 transmission pins toggle to show message traffic.

Push-button switches on the target board show how digital inputs are handled, while a potentiometer shows how to handle analog inputs via the CAN bus. In this manner, both the transmission and reception of messages can be easily demonstrated and understood.

MCP2510 software development is made easy by offering a variety of features designed to manipulate the functionality of the MCP2510. CAN messages are created and can be saved for later use and modification. Also, received messages are displayed in a separate window on the PC in a destuffed format to easily identify message contents. In addition, this tool provides the ability to read, display and modify all registers of the MCP2510. All of these features are designed to jump-start system designers' understanding of the MCP2510 and speed software development.

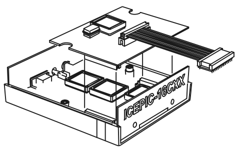
ICEPIC and ICEPIC2 PIC Emulators



ICEPIC and ICEPIC2 are fully modular, real time, in-circuit emulator systems, for use with Microchip 12CXX, 16CXX, and 17CXX processors, using interchangeable ‘personality daughterboards’ which are sold separately. Both emulators are supplied with their own 32 bit operating software, but can also be used with Microchip’s MPLAB™ development software.

System Requirements: IBM PC or compatible, VGA monitor, RS-232“C”, 3.5” disk drive, and Microsoft Windows 3.1, Win 95, Win 98, Win 2000, or NT.

Both ICEPIC & ICEPIC2 are supplied as a complete system with power supply, cables, manual and a copy of Microchip’s MPASM assembler. They both use the same windows software user operating environment (IDE) with a comprehensive GUI under Microsoft Windows software (also MPLAB™).

The emulator system is configured to handle the appropriate PIC microcontroller according to the personality daughter boards which are ordered separately. These daughter boards configure the emulator to handle specific devices from a wide range of PIC microcontrollers. This enables the user to adapt their ICEPIC system to support new PIC processors as they became available.

Digi-Key Part No. **269-2002-ND**
(See Z8 chart for applicable devices.)

GENERAL DESCRIPTION: Zilog's in-circuit emulator/programmer is an interactive, Windows™ based development tool providing a real-time environment for emulation and debugging, which includes a full-featured macro cross assembler to enhance programmer productivity. The Z86CCP01ZEM is a member of Zilog's ICEBOX™ product family of in-circuit emulators providing support for the Z8 microcontrollers. The emulator provides essential timing and I/O circuitry to simplify user emulation of the prototype hardware and software product. The Z8 CCP emulator provides users with a hardware platform to develop and debug software in a real-time environment. In contrast, software simulators provide significantly slower operation making them less practical for code development. The Z8 CCP emulator can be connected to a serial port (COM1, COM2, COM3, and COM4) of the host computer and uses Zilog Developer Studio (ZDS).**Z8 CCP Emulator Kit Contents:** Circuit Board: CMOS Z86C9320VSC, 20MHZ CMOS Z86C5020FSE ICE Chip, 8K x 8 Static RAM (for Code Memory) 18-Pin DIP ZIF Programming Socket, Holes Available for 28/40-Pin ZIF Programming Sockets, Sockets for 28/40-Pin Target Cables, 25-pin RS-232C Interface Connector: 18-Pin DIP Target Cable, Power Cable **Documentation:** Emulator User's Manual ***NOTE:*** *Power Supply RS-232C not included with Z86CCP01ZEM (recommended wall transformer T404-ND)* **FEATURES:** • In-Circuit Debug Emulation • Real-Time Emulation • Z8 GUI ZDS Emulator Software • Window-Based User Interface • On-Line Help • One-Time Programmable (OTP) Support • Selectable Baud Rates: 9600 to 57.6 Kbps • Bisync Error-Correcting Communications Protocol • Source-Level Debugging • Symbolic Disassembly in the Debug Window • Zilog Developer Studio (ZDS): – ZMASM, – Structured Assembly and Data Code, – Source-Level Debug Support, – Built-In Register Equates, – Linker, – Windows 95TM Integrated Editor

Z8® Series Microcontrollers

Z8 MCU Family

Overview: Zilog MCU products are targeted for cost-sensitive, high-volume applications including consumer, automotive, security, and HVAC. One-time programmable (OTPs) for prototyping as well as volume production where time to market or code flexibility is critical. A variety of packaging options are available. The same on-chip peripherals are used across the MCU product line with the primary differences being the amount of ROM/RAM, number of I/O lines present, and packaging/temperature ranges available. This allows code written for one MCU device to be easily ported to another family member.

Features: • **General-Purpose Register (GPR) File Architecture:** Every RAM register acts like an accumulator, speeding instruction execution and maximizing coding efficiency. Working register groups allow fast context switching. • **Flexible I/O:** I/O byte, nibble, and/or bit programmable as inputs or outputs. Outputs are software programmable as open-drain or push-pull on a port basis. Inputs are Schmitt-triggered with auto latches to hold unused inputs at a known voltage state. • **Analog Inputs:** Three input pins are software programmable as digital or analog inputs. When in the analog mode, two comparator inputs are provided with a common reference input. • **Timer/Counter (T/C):** The T/C consists of a programmable 6-bit prescaler and 8-bit downcounter, with maskable interrupt upon end-of-count. • **Interrupts:** There are six vectored interrupt sources with software-programmable enable and priority for each of the six sources. • **Watch-Dog Timer (WDT):** An internal WDT circuit is included as a fail-safe mechanism so that if software strays outside the bounds of normal operation, the WDT will timeout and reset the MCU. • **Auto Reset:** All family devices have internal Power-On Reset. • **Low-EMI Operation:** Mode is programmable via software or as a mask option. This new option provides for reduced radiated emission via clock and output drive circuit changes. • **Low-Power:** CMOS with two standby modes; STOP and HALT. • **Full Z8 Instruction Set:** Forty-eight basic instructions, supported by six addressing modes with the ability to operate on bits, nibbles, bytes, and words.

eZ80 - *The Next Generation*

EZ80190AZ050EC AND EZ80190AZ050SC

Just as the Z80 revolutionized the semiconductor industry, the next generation eZ80 is revolutionizing the way that communications are happening today. This elegant system-on-a-chip can serve web pages over a TCP/IP network, allowing easy system monitoring and control, effortless processor code updates, and system compatibility. This solution enables any browser with access to your network the ability to control and monitor a network application. The eZ80 executes Z80 code four times faster than traditional Z80s at the same clock speed, and can operate at speeds up to 50MHz. Unlike most 8-bit microprocessors, which can only address 64KB, the eZ80 can address 16MB without a Memory Management unit. The eZ80 Webserver also features an Embedded Internet Software Suite that enables the transmission and reception of HTML form data and the dynamic generation of web pages. **FEATURES:** • 50MHz Processor • Multiply and Accumulate Engine • 16MB Linear Addressing • 3.3V Operation • 2 DMA Channels • Universal ZiLOG Interface (selectable UART, IIC, SPI) • 6 PRTs with Prescalers • 8KB SRAM • 32-Bit GPIO with Interrupt Support • On-Chip Oscillator • Optimized Pipeline Architecture • ZiLOG Debug Interface

EZ801900110ZCO

The eZ80190 Webserver evaluation board is a general-purpose platform that allows the designer to evaluate the capabilities and operation of the eZ80190 Webserver device. It includes: eZ80 microprocessor operating at speeds up to 50MHz. **FEATURES:** • 1MB SRAM (15ns access time) • 1MB of user-programmable Flash, expandable to 4MB • 10BaseT Ethernet Interface (Realtek RTL8019AS) • 2 - DB9 RS232 Connectors • Real-Time Clock with Battery Back-up • 2 - Expansion Headers: GPIO, System Bus and Memory Interface

Z8Plus™ Microcontrollers

Employing the experience gained from the industry-standard Z80 and Z8 cores, the Z8Plus offers increased functionality, significantly higher performance, lower power requirements, and greater cost savings over other 8-bit microcontrollers. The Z8Plus is designed to be easy to use, even for designers who have never used a microcontroller before.

With single-cycle execution, powerful I/O capabilities and register-to-register architecture, the Z8Plus offers state-of-the-art flexibility and freedom for any designer in search of a low-cost solution for a variety of microcontroller applications.

The Z8Plus core offers several significant advantages compared to the current Z8 core. Foremost is performance improvement due to a reduced system clock division and a fixed instruction cycle time. The improvement is nearly 50%, depending upon instruction mix. For example, a Z8Plus-based part at 10MHz has performance comparable to a 16MHz part in production today. This, along with significant design improvements, leads to lower power and lower noise operation.

The Z8PE002 and Z8PE003 microcontrollers are the newest members of the popular Z8E001 Z8 Plus 8-bit microcontroller family. New features include voltage brown-out protection and power-on reset. Additionally, the "RESET" pin has been replaced with a general purpose I/O pin and oscillator circuitry to support RC configurations. These new parts are targeted at customers who require a powerful, yet small OTP microcontroller for use in general purpose applications.

CY3205-DK BASIC PSoC™ Development Kit

The **PSoC™ Development Kit** includes an In-Circuit Emulator (ICE) which consists of a base unit, cable, and power supply. The base unit is connected to the host PC via the parallel port and is included (with cable and power supply) in the Development Kit.

The ICE is driven by the Debugger subsystem of PSoC Designer. This software interface allows the user to run, halt, and single step the processor. It also allows the user to set complex event points. Event points can start and stop the trace memory on the ICE, as well as break the program execution. In addition to the Development Kit, different adapter pods are available to support the range of devices in the PSoC microcontroller family. They plug into the user's circuit board to provide the physical interface. Pods are available for low-cost expansion of the ICE capability. With each pod purchase, two matching devices are provided.

The PSoC Designer ICE also serves as a single-site device programmer. Programming Boards are devices which connect to the ICE and allow programming of Devices supported by that particular Programming Board. Each Programming Board Pod has a 5-pin programming header. This can be used for In-Circuit Serial Programming.

Pods are devices that connect to Modular cable from ICE and are needed to emulate a particular PSoC device. Comes with a PUP, a little demonstration board that you can emulate little projects on, and Feet which allows users to connect from Pod to Application for Debugging. Extra Feet and Pods can be purchased separately.

Development Kit Includes:

• In-Circuit Emulator (ICE) Base Unit • ICE Connection Cables and Power Supply • Demonstration Pup with LED bar graph for simple demonstrations • Programming Module for Dip parts • Feet for interfacing ICE to Target Board • 28-pin, Dip Emulator Pod • Free samples of the CY8C26443-24PI • CD-ROM with PSoC Designer (MCU Development Tool, Sample Projects, Documentation) • PSoC Designer: Integrated Development Environment (IDE) User Guide • Free support

System Requirements:

• 166MHZ Pentium or better (AMD Athlon or Better) • CD-ROM Driver, 128MB Ram, 100MB Free Disk Space • Parallel port, Windows 98 or Better, MSN Explorer 5.0 • Adobe Acrobat Reader

CY7C6XXX Series Of USB Microcontrollers

Cypress offers the industry's broadest line of USB microcontrollers, as well as a full set of development tools, supporting cost-driven applications such as keyboards and mice, as well as high-performance application like printers, scanners, xDSL modems, and digital cameras. Cypress has a wide range of solutions for Low-Speed USB applications, Full-Speed USB Applications and USB Hub Applications. Temperature range , commercial (0-70° F).

The CY7C630/1XXA is a family of 8-bit RISC One Time Programmable (OTP) microcontrollers with a built-in 1.5-Mbps USB Serial Interface Engine (SIE). The microcontroller features 35 instructions that are optimized for USB applications. In addition, the microcontroller features 128 bytes of internal RAM and either 2 or 4 Kbytes of program memory space. The Cypress USB Controller accepts a 6-MHz ceramic resonator as its clock source. This clock signal is doubled within the chip to provide a 12-MHz clock for the microprocessor.

The CY7C64013 and CY7C64113 are 8-bit One Time Programmable microcontrollers that are designed for full-speed USB applications. The instruction set has been optimized specifically for USB operations, although the microcontrollers can be used for a variety of non-USB embedded applications.

The CY7C646xx (EZ-USB FX) is Cypress Semiconductor's second-generation full-speed USB family. FX products offer higher performance and a higher level of integration than first-generation EZ-USB products. The FX builds on the EZ-USB feature set, including an intelligent USB core, enhanced 8051, 8-Kbyte RAM, and high-performance I/O. The CY7C646xx enhances the EZ-USB family by providing faster operation and more ways to transfer data into and out of the chip at very high speed.

The CY7C65100 Series offers high-performance, fixed-function Universal Serial Bus (USB) hub devices which comply with USB Specification, Revision 1.1. Up to four downstream USB ports are available to expand the USB attachment points available in your PC system. These self-contained devices require no firmware development for your design, thereby reducing the design risk associated with some microcontroller solutions. These Application-Specific Standard Products (ASSP) can improve time-to-market in a number of USB designs, including standalone hubs, motherboard hubs, and monitor hubs.

CY7C68013-56PVC (EZ-USB FX2) Single-chip integrated USB 2.0 Transceiver, Serial Interface Engine (SIE), and Enhanced 8051 Microprocessor, High Speed 480Mbits/sec. Enhanced 8051 microcontroller, and a programmable peripheral interface in a single chip. Integrated I^{2}C-compatible controller, runs at 100 or 400 kHz, 48-MHz, 24 MHz, or 12 MHz 8051 operation. Four integrated FIFOs, brings glue and FIFO inside for lower system cost. Automatic conversion to and from 16-bit buses, master or slave operation. FIFOs can use externally supplied clock or asynchronous strobes. Easy interface to ASIC and DSP ICs, up to 40 general purpose I/Os.

EZ-USB Microcontrollers

The **EZ-USB** chip packs the intelligence required by a USB peripheral interface into a compact integrated circuit. A Serial Interface Engine (SIE) decodes and encodes the serial data and performs error correction, bit stuffing, and other signaling-level details required by USB, and ultimately transfers data bytes to and from the USB interface.

The internal microprocessor is enhanced 8051 with fast execution time and added features. It uses internal RAM for program and data storage, making the EZ-USB family a soft solution. The USB host downloads 8051 program code and device personality into RAM over the USB bus, and then the EZ-USB chip reconnects as the custom device as defined by the loaded code.

The EZ-USB family uses an enhanced SIE/USB interface (called the "USB Core") which has the intelligence to function as a full USB device even before the 8051. The enhanced core simplifies 8051 code by implementing much of the USB protocol itself. EZ-USB chips operate at 3.3V. This simplifies the design of bus-powered USB devices, since the 5V power available in the USB connector (which the USB specification allows to be as low as 4.4V) can drive a 3.3V regulator to deliver clean isolated power to the EZ-USB chip.

AN2131-DK001 The development kit for the EZ-USB family provides complete hardware and software solutions for accelerating the firmware and device driver development for all the members of the families. The development kits use the actual silicon for the entire development. Cypress' software utilities and example firmware allow the user to generate USB traffic in hours, not weeks!

An evaluation version of the 8051 Keil Software Tools is included in the EZ-USB Development Kits. The evaluation version of the C-Compiler lets the designer write 8051 microcontroller applications in C and still get the efficiency and speed of assembly language. Advanced features from Keil tools include the ability to single step through code. The supplied Keil tools are fully functional, but are limited in object size to 4 Kbytes.

Kit includes: EZ-USB Development Board with AN2131QC, peripheral Board for prototyping, a USB cable, and an RS-232 9-pin to 9-pin cable.

Required Tools not included: Microsoft Visual C++, WDM DDK, and Windows 98 PC

The Ultra37000 family is designed to bring the flexibility, ease of use, and performance of the 22V10 to high-density CPLDs. The architecture is based on a number of logic blocks that are connected by a Programmable Inter-connect Matrix (PIM). Each logic block features its own product term array, product term allocator, and 16 macrocells. The PIM distributes signals from the logic block outputs and all in-put pins to the logic block inputs. All of the Ultra37000 devices are electrically erasable and In-System Reprogrammable (ISR).

The **Delta39K™ ISR™ CPLD** Family based on a 0.18-Ïm, six-layer metal CMOS logic process, offers a wide range of high-density solutions at unparalleled system performance. The Delta39K family is designed to combine the high speed, predictable timing, and ease of use of CPLDs with the high densities and low power of FPGAs. With devices ranging from 15,000 to 200,000 usable gates, the family features devices ten times the size of previously available CPLDs. Even at these large densities, the Delta39K family is fast enough to implement a fully synthesizable 64-bit, 66-MHz PCI core.

Warp® CPLD Development Tool for UNIX

Warp is a state-of-the-art HDL compiler for designing with Cypress' Complex Programmable Logic Devices (CPLDs). Warp utilizes a subset of IEEE 1076/1164 VHDL and IEEE 1364 Verilog as its Hardware Description Languages (HDL) for design entry. Then, it synthesizes and optimizes the entered design, and outputs a JEDEC or Intel hex file for the desired PLD or CPLD. Warp also accepts VHDL or Verilog produced by the Active-HDL FSM graphical Finite State Machine editor. For simulation, Warp provides a timing simulator, as well as VHDL and Verilog timing models for use with third party simulators.

Supports for the following Cypress Programmable Logic Devices: • PSI™ (Programmable Serial Interface™) • Delta-39K™ CPLDs • Quantum38K™ CPLDs • Ultra37000™ CPLDs • FLASH370i™ CPLDs • MAX340™ CPLDs • Industry-standard PLDs (16V8, 20V8, 22V10)

System Requirements • 32 MB of RAM (64 MB recommended) • 110 MB Disk Space • CD-ROM drive • Solaris 2.5 or later

Warp includes: • CD-ROM with Warp and on-line documentation (Getting Started Manual, User's Guide, HDL Reference Manual) • VHDL for Programmable Logic Textbook • Registration Card

TMS370C756A 8-Bit Microcontroller

The TMS370Cx5x family of single-chip 8-bit micro-controllers provides cost-effective real-time system control through integration of advanced peripheral function modules and various on-chip memory configurations. This device is implemented using high-performance silicon-gate CMOS EPROM and EEPROM technologies. The low-operating power, wide-operating temperature range, and noise immunity of CMOS technology, coupled with the high performance and extensive on-chip peripheral functions, make the TMS370Cx5x devices attractive in system designs for automotive electronics, industrial motor control, computer peripheral control, telecommunications, and consumer application.

Maximum clock frequency: 20MHz

Operating Temperature Range: -40°C to +85°C

MOTOROLA

Modular Evaluation System (MMEVS)

The Motorola Modular Evaluation System (MMEVS) is Motorola's economical, two-board emulator for the 68HC(7)05 and 68HC(9)08 family of microcontrollers. The MMEVS consists of a Platform Board and an Emulator Module (EM). Connected to your target system, the emulator replicates the actual target system MCU. An Integrated Development Environment (IDE) allows for quick edits and changes to assembly code, which makes design, debug and real-time evaluation of the target system as efficient as possible. Use this economical system to perform traditional debugging activities such as executing code in run or step mode, setting break points, monitoring or modifying CPU registers, memory and application variables, and creating log or script files to record test results or create test suites.

Features: • Real-time, non-intrusive, in-circuit emulation at the MCU's operating frequency • 64 hardware break points • Control of code execution in run or step mode • 64K bytes of fast emulation memory (SRAM) • Current limited target input/output connections • 6 Software-selectable oscillator clock sources • Command and response logging to save session history and/or to generate script files • SCRIPT command for automatic execution of a sequence of commands (such as system configuration setup and automated test runs) • Assembly source-level debugging • Host/emulator communications speeds as high as 57,600 baud • Extensive on-line MCU information via the CHIPINFO command • Integrated Development Environment (IDE) including editor, assembler, and assembly source-level debugger

Modular Development System (MMDS)

The Motorola Modular Development System (MMDS) is a full-featured emulator system for developing embedded systems using 68HC(7)05 and 68HC(9)08 microcontrollers. In addition to incorporating the debug features of the Motorola Modular Evaluation System (MMEVS), the MMDS adds advanced features such as real-time, dual-ported memory and a bus state analyzer to capture user-defined bus cycles or events. Use the dual-ported memory to tune filter circuits or monitor changes to program variables while your program is running at full speed. Verify nested or complex program flows using the bus state analyzer's full range of sequenced or logical event triggering and data capture modes. These added features help users develop, debug, and deliver 68HC05 or 68HC08 products in less time.

Features: • Real-time, non-intrusive, in-circuit emulation at the operating frequency of the target device • Control of code execution in run or step mode • Real-time bus state analyzer: 8K x 64 real-time trace buffer. Display of real-time trace data. Four hardware triggers. Nine triggering modes up to 8190 pre- or post-trigger points for trace data. 16 general-purpose logic chips. 16-Bit time tag, or optional 24-Bit time tag. • 4 complex break points (any combination of address, data, control, and/or I/O • 64 instruction break points • 32 real-time variables • 32 bytes of real-time memory • 64K bytes of fast emulation memory (SRAM) • Current limited target input/output connections • 6 software-selectable oscillator clock sources • Command and response logging to save session history and/or to generate script files • SCRIPT command for automatic execution of a sequence of commands (such as system configuration setup and automated test runs) • Assembly source-level debugging • Host/emulator communications speeds as high as 57600 baud • Extensive on-line device information via CHIPINFO command • Integrated Development Environment (IDE) including editor, assembler, and source-level debugger

STATIC PROTECTION

Protection of static sensitive parts is a MUST in today's semiconductor market.
To ensure the quality that Digi-Key customers have come to expect,
the Digi-Key static control program includes proper static safety protection in the following areas:

- ***Receiving, Incoming Inspection, and QC***
- ***Order Picking***
- ***Final Inspection***
- ***Packaging and Shipping***

Shielded metallized bags are used in order picking, and anti-static, non-CFC, photo degradable packaging peanuts are used in packaging and shipping.

As our program is continuously updated with the latest static control technology, you can be reassured that Digi-Key's static sensitive parts are quality safe, *all the way to your door step!*
